INDONESIA: THE WORLD'S SAGO HUB

Sago-producing regions stretch across the archipelago, with the largest reserves in eastern Indonesia.

WHY SAGO?

Every part creates value:

Holding over **85%** of the world's sago resources, Indonesia offers vast opportunities for sustainable industrial development.

Designated as a priority commodity in Indonesia's National Medium-Term Development Plan (RPJMN) 2025–2029, sago is key to strengthening food security, driving downstream industries, and attracting investment.

Sago for a sustainable future

Food Security

- Alternative carb source
- Supports diversification
- Gluten-free ingredient

Nutrition

- Complex carbohydrates
- Easily digestible
- Healthier food products

Environment

- Carbon sequestration
- Thrives in peatlands
- Biodiversity conservation
